

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently amended): An immunogenic composition comprising at least one *Streptococcus pneumoniae* polysaccharide-protein conjugate, formulated with at least one unconjugated *Streptococcus pneumoniae* protein antigen, and an adjuvant which is a preferential inducer of a TH1 response.
2. (Currently amended): The immunogenic composition of claim 1, wherein the unconjugated *Streptococcus pneumoniae* protein antigen is an outer surface protein or a secreted protein of *Streptococcus pneumoniae*.
3. (Currently amended): The immunogenic composition of claim 1, wherein the unconjugated *Streptococcus pneumoniae* protein antigen is a toxin, adhesion or lipoprotein of *Streptococcus pneumoniae*.
4. (Currently amended): The immunogenic composition of claim 1, wherein the unconjugated *Streptococcus pneumoniae* protein antigen is selected from the group consisting of: pneumolysin, PspA or transmembrane deletion variants thereof, PspC or transmembrane deletion variants thereof, PsaA or transmembrane deletion variants thereof, glyceraldehyde-3-phosphate dehydrogenase, and CbpA or transmembrane deletion variants thereof.
5. (Cancelled).
6. (Currently amended): The immunogenic composition of claim 1, wherein the protein carrier in the polysaccharide-protein conjugate is selected from the group consisting of: Diphtheria toxoid, Tetanus toxoid, CRM197, Keyhole Limpet Haemocyanin (KLH), protein derivative of Tuberculin (PPD), and protein D from *H. influenzae*.

7. (Previously presented): An immunogenic composition of claim 1 which comprises at least four pneumococcal polysaccharide antigens from different serotypes.

8. (Previously presented): An immunogenic composition as claimed in claim 1, wherein the adjuvant comprises at least one of the following: 3D-MPL, a saponin immunostimulant, or an immunostimulatory CpG oligonucleotide.

9. (Currently amended): An immunogenic composition as claimed in claim 8, wherein the adjuvant comprises a carrier selected from the group consisting of ~~comprising~~: an oil in water emulsion, liposomes, and an aluminium salt.

10. (Cancelled).

11. (Currently amended): A vaccine comprising the immunogenic composition of ~~claim 1~~ any one of claims 1-9.

12. (Withdrawn): A method of preventing or ameliorating *Streptococcus pneumoniae* infection in a patient over 55 years of age, comprising administering an effective amount of a vaccine comprising a *Streptococcus pneumoniae* polysaccharide, at least one *Streptococcus pneumoniae* protein, and a TH1 inducing adjuvant.

13. (Cancelled).

14. (Withdrawn): A method of making the immunogenic composition of claim 1, comprising the steps of:

selecting one or more pneumococcal polysaccharide antigen(s);

selecting one or more pneumococcal protein antigen(s);

selecting a TH1 inducing adjuvant; and

mixing said polysaccharide and protein antigens and adjuvant with a suitable excipient.

15. (Withdrawn): A method of preventing or ameliorating Otitis media in Infants, comprising administering a safe and effective amount of a vaccine comprising a *Streptococcus pneumoniae* polysaccharide antigen, a *Streptococcus pneumoniae* protein antigen and a TH1 inducing adjuvant, to said Infant.
